| 8. | Upper decency panel ends | x2 |
| 9. | Platform, extended | x2 |
| 10. | Upper floor | x1 |
| 11. | Lower deck bulkhead | x2 |
| 12. | Life guard | x2 |
| 13. | Life tray | x2 |
| 14. | Side life guard | x2 |
| 15. | Controller | x2 |
| 16. | Trolley mast | x1 |
| 17. | Destination boxes | x2 |

Build Steps

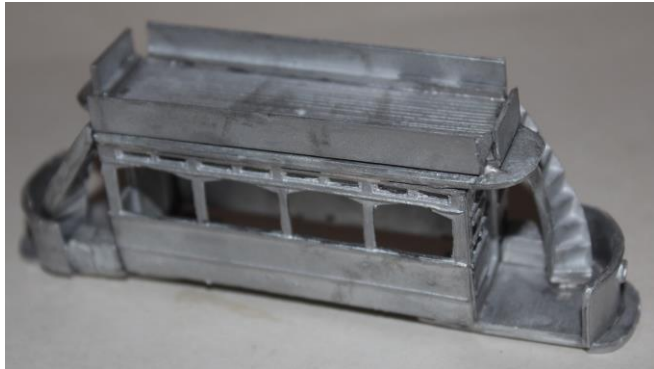

1. Fix bulk heads to sides squarely and marry all subassemblies to produce a box effect
2. With model inverted, attach platforms to bottom edges of bulkheads; ensuring the lip is within the body and not on the platform.
3. Carefully bend the dash panels to fit the curve of the platform, trim to length and fit to platform, and fit the resistance box between the end of the dash and the bulkhead.

4. Fix the ceiling/upper deck floor piece
5. Attach upper deck sides and ends to the floor.

6. Fit the stairs

7. Turn model over and attach truck sides to body sides ensuring exact centrality
8. Fix the under-gear ie life guards under the front panels and the life trays attached to the front edge of the truck sides so they do not interfere with the mechanism.
